PATENT
Filed: May 22, 2000

5. (original) The system of Claim 4, wherein each position-dependent media key is encrypted by a respective device key.

6. (original) The system of Claim 5, further comprising plural players, each having a device key of known position with which to decrypt the media key to play content encrypted with the media key.

7-9 (canceled).

10. (original) A computer program device, comprising:

a computer program storage device including a program of instructions usable by a decryption computer, comprising:

logic means for receiving a media key block (MKB) having plural positions, each position having a number related thereto;

logic means for accessing a device key, the device key being associated with a position corresponding to one of the positions of the MKB, the position associated with the device key being known to the decryption computer;

logic means for decrypting the number at a position in the MKB corresponding to the position associated with the device key to render a decrypted position-dependent media key; and

logic means for reverse transforming the position-dependent media key with a number representing the position of the position-dependent media key in the MKB, to render a media key.
